Changing your User Password

Your password on your personal or professional device should be updated regularly for security reasons.

Often you will be given prompts to

change your password so that you are adhering to the standards of security that need to be upheld.

It is not difficult to change your password and should only take 2 minutes

How to Change your Password

There are only 3 Simple steps that you need to do:

1. When you are already logged on to your PC press the control, alt, and delete buttons at the same time on your keyboard.
